

A national AI rollout, delivered once before

Team Monolith builds AI learning infrastructure for schools. Korea's Ministry of Education certified our platform, and it now runs in 800+ schools

800+

SCHOOLS

166,053

STUDENTS

96,900

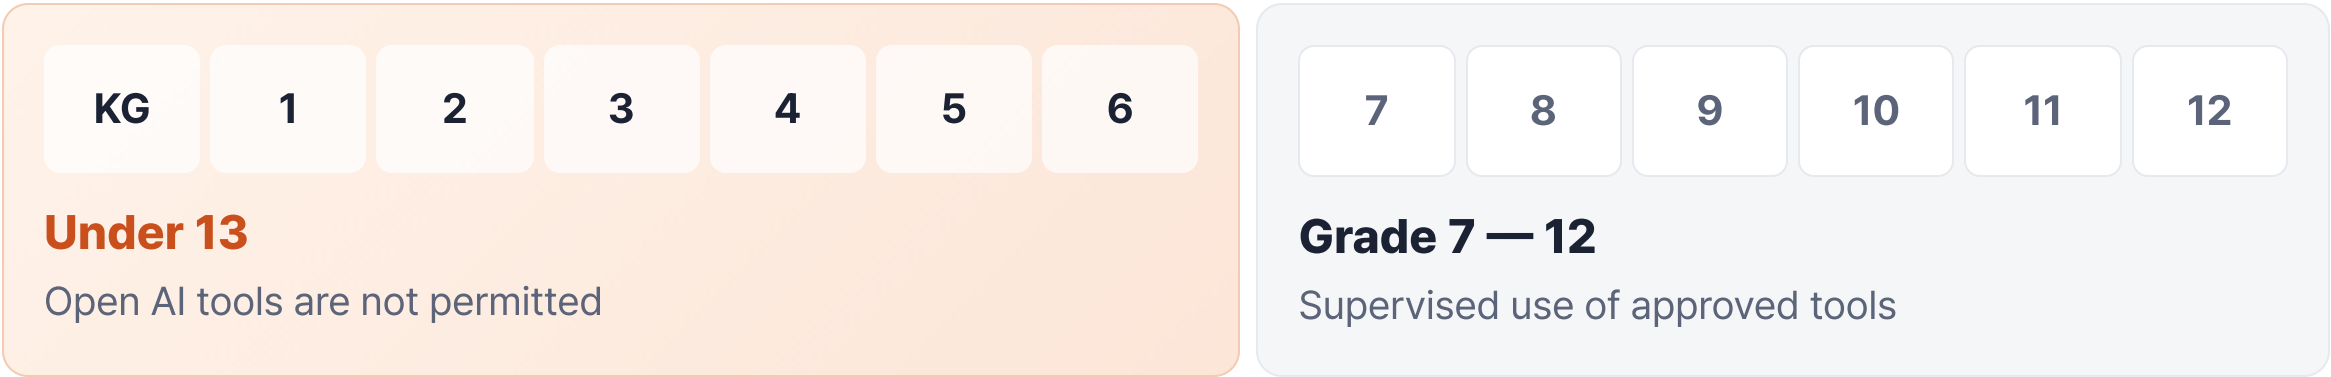

TEACHERS TRAINED

Profitable

ON A SINGLE SEED ROUND

AI made compulsory, kindergarten to grade twelve

Now every school,
and different rules under thirteen

AGE 4AGE 13AGE 18

Every public and private school	Assessed through projects	Open AI tools are not permitted under 13
---------------------------------	---------------------------	--

2 September 2026 — after a year of positive results in public schools, the Cabinet extended the AI curriculum to every private school

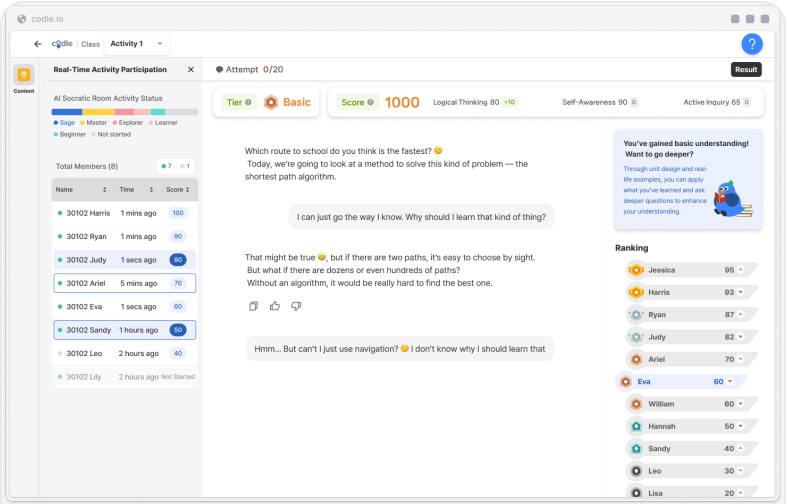

A national curriculum change, already delivered

Korea, two years
ahead of here

800+	166,053	96,900	2024
Schools in Korea	Active students	Teachers trained to date	Passed the Ministry's certification

We went from certification to **800 schools** inside two years

The UAE is now making the same move. **We would like to repeat this here.**

A Codle lesson in class

Three things made it work

The same three we
would use here

01 **Codle, our classroom platform**

Teachers run it easily and effectively, and **assessment is built from the data it records**

02 **Teacher training in the same package**

96,900 teachers trained in Korea to date, so schools onboard quickly

03 **Codle's content management system**

Our content team **builds, updates and ships lessons quickly**, and 430+ are complete across K-12

87%

of the times a student got something wrong, they came back and solved it

1.19 million return attempts · 91,103 students · Codle platform data, 2022–2026

The same conditions, already in place

And one Abu Dhabi
does not yet have

A The platform already fits the rule, from this week

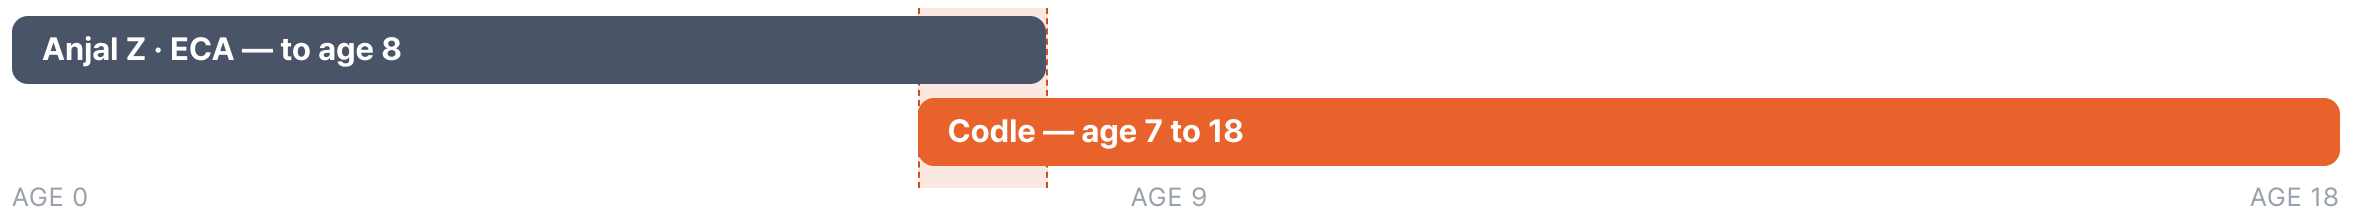

The teacher opens the lesson and the AI asks questions rather than giving answers, so **a child under thirteen works without an open chatbot**

B Training is already running here

We have already trained **53 teachers** across five UAE schools

C Anjal Z and the Early Childhood Authority

A **child development standard** to design the youngest lessons against, and a content system to build them on

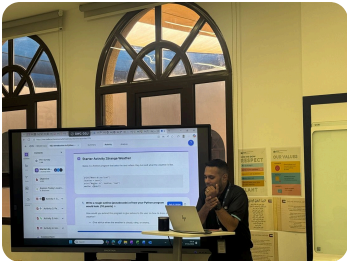

They overlap at **ages 7 and 8**

Korea's playbook, run in Abu Dhabi

Teachers first, then classrooms

WHERE WE WOULD START	WHAT WE WOULD DO	WHEN
ADEK schools Department of Education and Knowledge	Teacher training inside Term 1, then a first pilot	Term 1
Aldar Education 31 schools, 38,000+ students	Ask for one school, three weeks, one class . Then school by school	Term 1 → 2
ECA network Early years settings	<u>Age 4 to 6 design sessions</u> with ECA	Through the programme

Already underway — teacher training across five UAE schools, and a three-week student pilot at the British International School Abu Dhabi

Yeongbin Bae, co-founder, resident in Abu Dhabi from September 2026

TARGET — BY THE END OF THE PROGRAMME

500+ teachers onboarded · 150 through the full course · 4 schools on their own budget

The team that did it the first time
